

PROTECTION

This hard red winter wheat variety was developed by Colorado State University and licensed exclusively to AGSECO. It is the first CLEARFIELD® variety with Jagger in its pedigree. Like Jagger, Protection does not have a good level of resistance to leaf rust, but will often escape damage due to its early maturity. Protection is moderately resistant to soil borne mosaic and intermediately tolerant to acidic soils, making it the only CLEARFIELD® variety (to date) that has some adaptation to central Kansas and Oklahoma. Protection offers good drought tolerance and excellent grazing potential.

Characteristics

Plant Height	Medium Tall
Maturity	Early
Coleoptile Length	Medium
Seed Size	Large
Straw Strength	Average
Test Weight	Good
Winterhardiness	Very Good
Milling & Baking	Acceptable
Yield Potential	Very Good
Grazing Potential	Very Good

Disease & Insects

Barley Yellow Dwarf	N/A
Hessian Fly	Susceptible
Powdery Mildew	Mod. Resistant
Leaf Rust	Susceptible
Septoria Leaf Blotch	N/A
Spindle Streak Mosaic	Resistant
Soil Borne Mosaic	Mod. Resistant
Stripe Rust	Mod. Resistant
Tan Spot	Intermediate
Wheat Streak Mosaic	N/A

Pedigree: Jagger, Above sib.

PVPA Status: Protected, must be sold as a class of certified seed.
